

February 2021

The Utah State Legislature, under [S.B. 111, *Higher Education Amendments*](#), merged the Utah System of Technical Colleges with the Utah System of Higher Education under the governance of the new Utah Board of Higher Education, effective July 1, 2020. The attached report summarizes the activities and performance of Utah's technical colleges during the final year of UTech governance.

Utah System of Technical Colleges 2020 Annual Report

(February Release)

Utah's technical colleges exist to provide businesses with skilled employees able to quickly adapt to new and emerging technologies in a 21st-century world. Through occupational advisory committees, *every* program offered at a technical college is overseen by regional industry leaders to ensure that students who graduate have the current skills needed by local employers. The guidance of industry partners is invaluable and directly contributes to the technical colleges' consistently high job-placement rates.

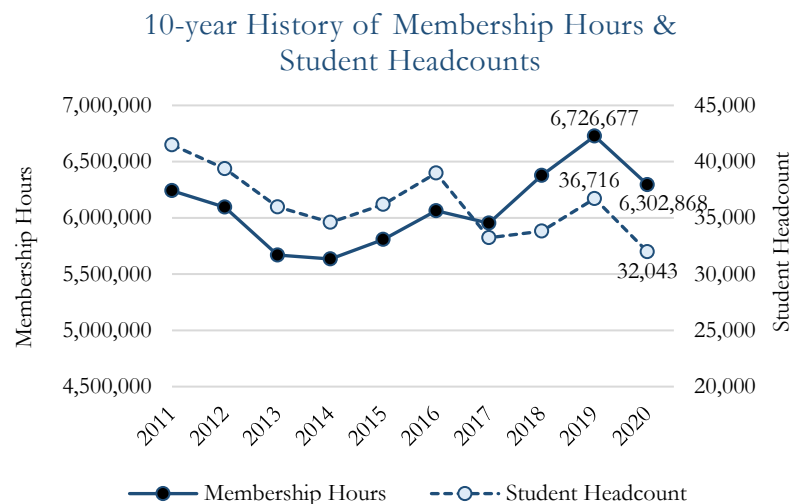

Education offered by Utah's technical colleges directly fuels Utah's economy and contributes to individuals' economic well-being. The impact of technical education on students' lives is vast: one recent [study \(udrc.utah.gov/utechroi/index.html\)](http://udrc.utah.gov/utechroi/index.html) noted that technical college graduates experience an average wage increase of *between 20% and 30%* from one year prior to one year after graduating, depending on their program of study. An internal analysis (see page 8) showed that this increase translates to *over \$500 in extra income every month* when comparing one year prior to one year after graduation. This increase can make the difference in students no longer needing to receive public assistance, entering the middle class, or purchasing a car or a modest home.

The move to become one unified higher education system has been a positive one. Through collaborative partnerships and effective policy decisions, technical colleges can expand access to higher education, provide relevant and in-demand certificates, and create seamless pathways for students desiring to further their education at one of Utah's degree-granting colleges or universities.

FY 2020 Student Enrollment and Outcomes

Due to the onset of the coronavirus pandemic, Utah saw its colleges close in April and May 2020. Even after reopening in June, technical colleges limited class capacities and offered fewer short-term training opportunities than in 2019 to slow the spread of COVID-19. Consequently, technical colleges systemwide provided 6.30% fewer hours of instruction in FY 2020 than the year before. Student headcounts also dropped to their lowest numbers in decades; in FY 2020, technical college headcounts declined by almost 13% over FY 2019. (Note that these figures do *not* include Custom Fit trainees, the Custom Fit program being discussed hereafter.) While colleges have undergone strategic shifts impacting specific courses and programs taught, the most significant contributor to these declines is undoubtedly COVID-19, as colleges each lost approximately two months of instruction time this year.

Technical colleges produced 6,400 graduates in FY 2020, providing Utah businesses with new employees, each equipped with the skills to succeed in their respective industries. The most popular programs continue to be those in the health care sector; programs leading to employment in health industries accounted for 49.5% of all awards conferred in 2020.

Most Awarded Certificates of FY 2020

Adult Students

Program	Graduates
Certified Nurse's Assistant	662
Licensed Practical Nurse	283
Welding Technology/Welder	255
Medical/Clinical Assistant	245
Cosmetology/Cosmetologist	225
Emergency Care Attendant (EMT Ambulance)	212
Phlebotomy Technician/Phlebotomist	206
Commercial Driver's License	201
Electrician	161
Aesthetician/Esthetician and Skin Care Specialist	147

Secondary Students

Program	Graduates
Certified Nurse's Assistant	710
Emergency Care Attendant (EMT Ambulance)	88
Automotive Mechanics Technology	81
Carpentry/Carpenter	73
Pharmacy Technician/Assistant	69
Welding Technology/Welder	42
Nail Technician/Manicurist	35
Phlebotomy Technician/Phlebotomist	29
Medical Assistant	22
Home Health Aide/Home Attendant	20

System and individual technical colleges' performance may be examined in the FY 2020 Student Enrollment and Outcomes (SEO) Reports found in Appendices A1 through A9 on pages 11 through 19. SEO Reports highlight four primary rate calculations described below. Though universities report rates based on cohorts (e.g., freshmen entering in the fall) and temporal windows (e.g., six years to complete a bachelor's degree), these factors are not considered at technical colleges due to the open-entry/open-exit nature of the institutions and the varying lengths of programs offered. Rate calculations examine only certificate-seeking students who have left their programs through graduation or withdrawal; students still enrolled at the end of the year are excluded.

- Graduation Rates** – Graduation rates divide the number of graduates by the number of students who have exited programs. Graduation rates herein differ from those reported to accreditors. The Council on Occupational Education's policies instructs colleges to exclude students from graduation rates when they withdraw from one program and immediately enroll in another (excluded from only the first program's graduation rate), or when they are unable to earn a certificate due to illness, incarceration, death, military mobilization, or religious missions. UTech includes these students to account for *all* students, regardless of their reasons for withdrawing.
- Completion Rates** – Completion rates divide the number of completers by the number of students who have exited programs. Completers, under COE's definition, are program graduates *or* students who obtain related employment consequent to their studies ("non-graduate completers"). As technical colleges exist to meet the needs of Utah's employers for technically skilled workers, students who are hired early are counted positively when reporting to COE. Unlike graduation rates above, completion rates exclude students from the denominator when they are unable to complete programs for reasons of internal transfer, sickness, incarceration, military mobilization, etc.
- Placement Rates** – Placement rates examine only completers (graduate or non-graduate) and divide the number of placed students by the sum of placed and unplaced students. Successful placement is employment in a field related to the program of study, enlistment in military service, or enrollment in another postsecondary educational program. As before, COE instructs colleges to exclude students from placement rate denominators when they are unavailable for placement for reasons of sickness, incarceration, religious missions, etc. Also excluded are students who refuse employment offers or are awaiting state licensure before they can work.
- Licensure Rates** – Licensure rates are calculated for programs, the resultant occupations of which require state licensure (e.g., Cosmetology, Practical Nursing, etc.). Rates are calculated by dividing the number of students who pass a required licensure exam by the number of students who took an exam.

Board of Trustees Strategic Goals & Metrics

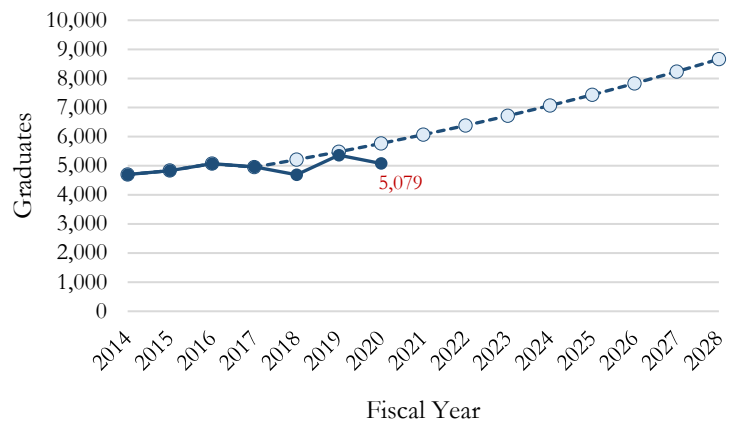

In 2017, the UTech Board of Trustees established the following 10-year goals and associated metrics to assess systemwide performance. In the graphics that follow, previously established goals are shown using dotted lines, while actual performance is denoted with solid lines.

Goal #1: Provide every student the opportunity to obtain quality career and technical education resulting in a postsecondary credential.

- *Metric 1A* – Increase the number of postsecondary students graduating with a Board-approved postsecondary certificate by 75% by 2028.

In 2020, the number of postsecondary graduates at Utah's technical colleges fell by 5.31%, leaving the UTech system 687 awards short of its goal for the year. By all accounts, the decline in graduates produced is due to the ongoing COVID-19 pandemic. All Utah public technical colleges closed their doors in April and May 2020, ceasing operations to slow the spread of the coronavirus. Though technical colleges continued offering as much online instruction as possible, hundreds of students were unable to demonstrate the hands-on skills necessary to earn their certificates and thus did not graduate in the weeks or months wherein originally expected. Barring continued disruption of students' schedules from the pandemic, technical colleges should see an increase in the number of graduates produced in FY 2021, as all those students who would have graduated in FY 2020 will begin finishing their programs in the first few months of FY 2021.

UTech Postsecondary Graduates,
FY 2014-20 with Desired FY 2021-28 Growth

- *Metric 1B* – Increase the proportion of enrolled secondary students graduating with a postsecondary certificate prior to high school completion to 33% by 2028.
- *Metric 1C* – Increase the proportion of enrolled secondary students graduating with a postsecondary certificate prior to or within one year following high school completion to 50% by 2028.

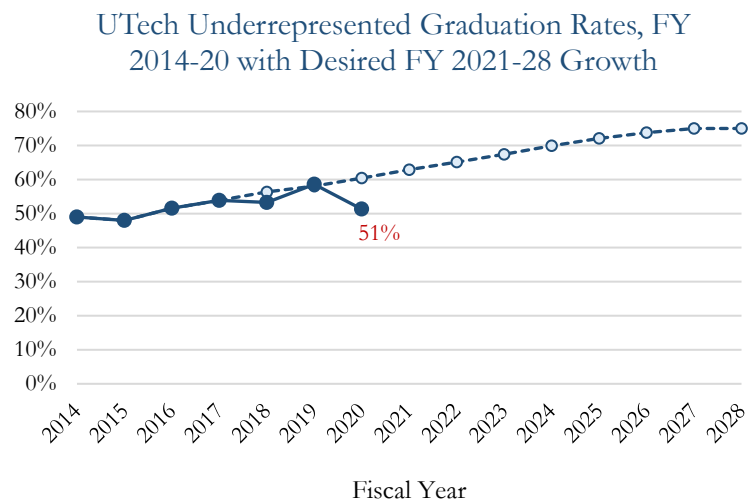

UTech Secondary Graduation Rates,
FY 2014-20 with Desired FY 2021-28 Growth

Among technical college students belonging to the high school graduating class of 2020, almost 18% earned a technical certificate before finishing high school. This is the lowest secondary graduation rate observed since 2014 and is two percentage points lower than that of the class of 2019. The decline is attributed to the COVID-19 pandemic and the eight-week shutdown at technical colleges in April and May 2020. However, retention of secondary students and their completion of certificate programs within the first year after high school graduation continues to improve, climbing to 31% in FY 2020. The increase in this rate over FY 2019 implies that retained high school graduates finish their programs shortly after high school completion, as the 2019 cohort was unaffected by college shutdowns occurring roughly 10 months later.

- *Metric 1D* – Increase the percentage of underrepresented students graduating with a technical college certificate to 75% by 2028.

Underrepresented students are those of ethnic and racial minority status, students receiving Pell Grants or BIA/DWS sponsorship, students with a disability, or those identified as single parents, displaced homemakers, economically disadvantaged, or of limited English proficiency. As a system, UTech had improved its underrepresented graduation rate by almost 10 percentage points over the five years prior to FY 2020. This rate dropped significantly in FY 2020, presumably due to the COVID-19 pandemic as many students who *would have* graduated in spring 2020 were unable to due to college closures. We anticipate an uptick in FY 2021 as many of these students were retained into the new fiscal year and should complete their programs in the first few months thereof.

Goal #2: Meet critical economic and employer needs.

- *Metric 2A* – Continue to achieve placement rates for completers of certificate programs that meet or exceed accreditation standards by 10-20% annually. (Placement is defined as related employment, military service, or continuing education.)

One measure of the extent to which technical colleges meet Utah employers' needs for technically skilled workers is their placement rate. The colleges, to maintain accreditation by the Council on Occupational Education, must maintain a 70% placement rate *for each program offered*. If a program fails to meet this standard, the college must submit a plan for improvement detailing concrete steps to bring placement rates up to the minimum standard. If rates continue to fall below this threshold, the colleges must discontinue underperforming programs or risk losing accreditation. Placement, as defined by COE, includes students who receive employment in a field related to instruction, serve in the military, or continue their education in another program or at another college/university.

The UTech Board of Trustees set a goal that technical colleges continue to maintain placement rates 10-20% above COE's minimum standard. Among students completing programs in FY 2020, 87% have been placed in related employment, continuing education, or military service. This rate is a testament to the close relationships between colleges and industry partners in ensuring that skills taught to students are relevant and desired by local employers.

Metric 2B – Increase the number of incumbent workers receiving short-term job upgrade or continuing occupational education training in proportion to overall program enrollment by 25% by 2028.

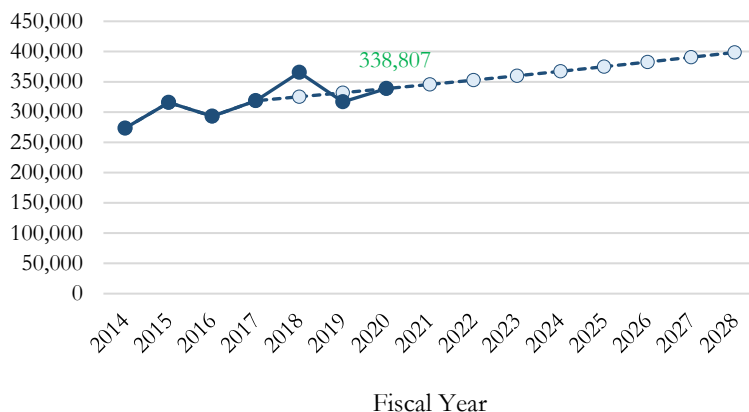

After overhauling UTech policy in FY 2017 to clarify what types of courses factor into college performance measures, UTech saw a steady increase in short-term occupational enrollees until FY 2020. Not only did COVID-19 force the closure of technical colleges for two months, but upon their reopening, institutions limited non-credentialed trainings offered and reduced classroom capacities. Additionally, Dixie Tech, historically the largest provider of short-term workforce training, underwent a strategic shift in FY 2020, directing fewer resources to its short-term classes and more to its COE-approved programs. These factors led to a substantial drop in FY 2020 short-term occupational enrollees.

Short-term Occupational Enrollees,
FY 2014-20 with Desired FY 2021-28 Growth

- *Metric 2C* – Increase the amount of customized workforce training provided to Utah employers through the Custom Fit program by 25% by 2028.

Custom Fit Instructional Hours,
FY 2014-20 with Desired FY 2021-28 Growth

The Custom Fit program provides state-subsidized training to Utah businesses for incumbent workers. Companies partner with technical colleges and certain degree-granting institutions to design and/or arrange training opportunities to help Utah companies to grow, increase productivity, or gain a competitive edge. The Board of Trustees established a goal to increase instructional activity sponsored by Custom Fit by 25% within a decade.

In 2020 instructional hours sponsored by Custom Fit increased by 6.9% over 2019, even after all trainings ceased in April and May 2020. This illustrates the high demand for Custom Fit training among industry partners, as training opportunities were largely complete and state training funds largely exhausted before the pandemic hit.

Goal #3: Improve internal efficiencies.

- *Metric 3A* – Increase the percentage of certificate-seeking students who graduate with a technical college certificate to 80% for shorter programs (fewer than 600 hours), 70% for medium-length programs (600 hours or more but fewer than 900 hours), and 60% for longer programs (900 hours or more) by 2028.

Graduation rates are stratified by program length and are lower for longer programs than for the shortest programs. For programs of fewer than 600 hours, the graduation rate is consistently above 80%, as

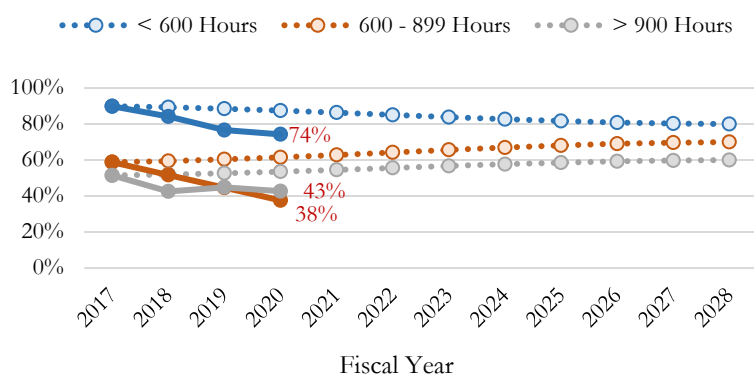

UTech Graduation Rates,
FY 2017-20 with Desired FY 2021-28 Growth

those programs may be completed quickly. (In 2020, technical colleges issued 2,130 certificates from programs requiring fewer than 150 hours (4-8 weeks) to complete, including Certified Nurse's Assistant, EMT, Phlebotomy, and Petroleum Well Control programs, among others.) Technical colleges are committed to maintaining the current high rate for these programs. For programs of more than 900 hours, the graduation rate fell to 48% in 2020, slightly below the system goal for the year. The rate for mid-length programs also fell to 41% in FY 2020, with the COVID-19 pandemic a likely contributing factor.

- **Metric 3B** – Increase the percentage of certificate-seeking students in *identified high-impact programs* who graduate with a technical college certificate to 80% for shorter programs (fewer than 600 hours), 70% for medium-length programs (600 hours or more but fewer than 900 hours), and 60% for longer programs (900 hours or more) by 2028.

High Impact Graduation Rates,
FY 2017-20 with Desired FY 2021-28 Growth

The Board of Trustees set the goal that graduation rates for high-impact programs mirror the desired rates of other programs at the colleges (i.e., an 80% for programs of fewer than 600 hours, 70% for programs of 600-899 hours, and 60% for programs of 900 hours or more).

Graduation rates for high-impact programs have slipped over the past three years to 74% for the shortest, 38% for mid-length, and 43% for the longest programs. One reason for low and even declining graduation rates from high-impact programs is Utah's overall economy. Before the pandemic hit in spring 2020, Utah experienced unemployment below 4%. In such an economy, employers regularly hire UTech

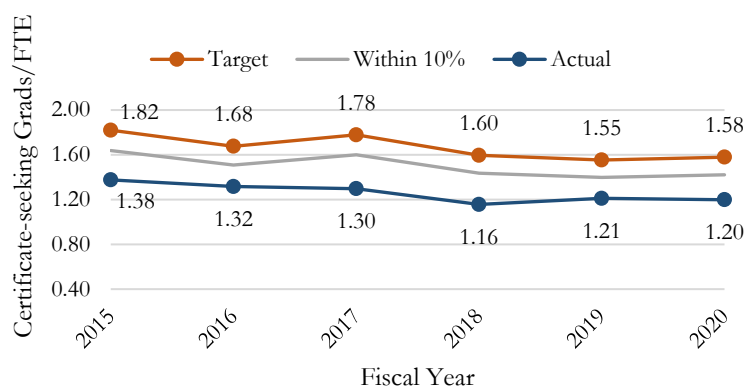

students before they can complete their training. In fact, in FY 2020, the technical college system saw 1,477 students who left their programs early with employment in a field related to their instruction.

- **Metric 3C** – Achieve 90% of the ideal annual number of awards per certificate-seeking full-time-equivalent (FTE) student based on employer-demanded program lengths.

UTech calculates *certificate-seeking* graduates per FTE by dividing membership hours accrued by certificate-seekers by 900 to derive a full-time equivalent headcount. The number of certificate-seeking graduates is then divided by the resulting quotient.

Due to the variable lengths of programs offered, awards per FTE is a difficult metric to use within a technical college system. A "target" graduates-per-FTE is calculated by dividing 900 hours by the average length of certificates awarded in the fiscal year. In theory, if every student completed in 100% of the expected time, graduates per FTE would equal this ideal. In 2017, the UTech Board set a goal that the systemwide graduates per FTE should be within 10% of this target calculation. Note, however, that these calculations are performed retroactive to the fiscal year, leaving colleges unable to benchmark or track progress mid-stream. Additionally, this metric is extraneous within the goal to improve internal efficiencies, as graduation rates are considered above; as graduation rates rise, graduates per FTE also increases. Therefore, technical colleges will look to refine metrics evaluating efficiency under the new Utah Board of Higher Education.

UTech Graduates per Certificate-seeking FTE,
FY 2015-20

Tuition

Utah statute requires that technical colleges provide low-cost training to adults and tuition-free training to secondary students. Technical colleges further strive to minimize secondary students' fees and textbook costs. Postsecondary tuition is assessed based on a student's scheduled hours of instruction. Tuition rates for FY 2019 and FY 2020 are displayed below and are assessed per membership hour.

Technical College Tuition per Membership Hour, FY 2019 – FY 2020

College	FY 2019 Tuition	FY 2020 Tuition	Growth	
Bridgerland Technical College	\$1.95	\$2.00	\$0.05	2.6%
Davis Technical College	\$2.10	\$2.10	--	--
Dixie Technical College	\$2.25	\$2.25	--	--
Mountainland Technical College	\$2.00	\$2.10	\$0.10	5.0%
Ogden-Weber Technical College	\$2.00	\$2.00	--	--
Southwest Technical College	\$1.95	\$2.00	\$0.05	2.6%
Tooele Technical College	\$2.00	\$2.00	--	--
Uintah Basin Technical College	\$2.00	\$2.00	--	--

Tuition for some technical college programs differs from the rate schedule provided above. Per UTech policy, differential tuition rates must be approved annually by the Board of Trustees. In FY 2020, tuition was kept lower for the Farming and Ranch Management programs at Bridgerland and Uintah Basin Technical Colleges to remove students' barriers to receiving postsecondary education. In addition, differential tuition rates were approved at Bridgerland, Davis, Ogden-Weber, and Tooele Technical Colleges for students participating in the respective college's academic learning center.

Technical college fees differ from program to program and college to college and are charged in addition to tuition. Fees typically help cover the cost of consumables and/or college services.

Custom Fit

Custom Fit is a flexible, customized training program designed to meet the training needs of Utah businesses. Each year, more than 1,500 local businesses contract with one of Utah's eight technical colleges, Utah State University Eastern, or Snow College to receive state-subsidized training for their employees. For almost 40 years, Custom Fit has provided a means for small and large businesses to grow, increase productivity, or maintain a competitive edge.

In FY 2020, the Custom Fit program served 1,663 distinct companies throughout the state, 3.09% fewer than in 2019. Meanwhile, the colleges taught 6.93% more hours than last year (338,807 in total), though individual trainees dropped by 10.01% (17,662 in total), implying that students' training sessions in FY 2020 lasted longer on average than were observed in FY 2019. In fact, the average Custom Fit trainee in FY 2020 spent three more hours in training than the average FY 2019 trainee. Where the Custom Fit program exists to provide customized training solutions for Utah businesses based on their individual needs, the costs of training, the number of companies served, and the amount of instruction that resources can provide may differ widely year to year. In 2020, 49% of training sessions were offered to companies seeking increased productivity, 38% to companies seeking growth, and 13% to businesses seeking to gain or maintain a competitive edge.

Custom Fit 10-year History of Training Hours & State Appropriations

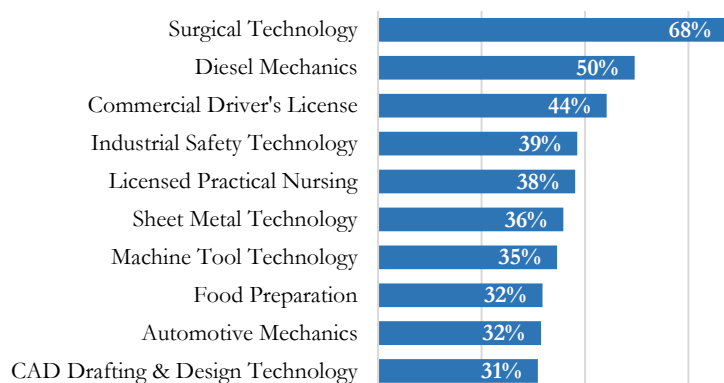

Per UTech policy, at least 50% of every training opportunity provided or arranged by the Custom Fit program must be paid by the companies contracting with Custom Fit. In 2020 the average company contribution to training received was 61.13%. These funds paid by companies may then be utilized to provide training to *even more businesses*, stretching legislative investment in the Custom Fit program further. In FY 2020, the Custom Fit training program provided \$5,425,720 in training to local employers, exceeding the annual Custom Fit legislative appropriation by over \$866 thousand.

Custom Fit Appropriations, Company Contributions, & Training Costs, FY 2011-20

Student Employment & Wage Outcomes

Top 10 Increases to Graduates' Wages, 1 Year Pre- to 1 Year Post-graduation

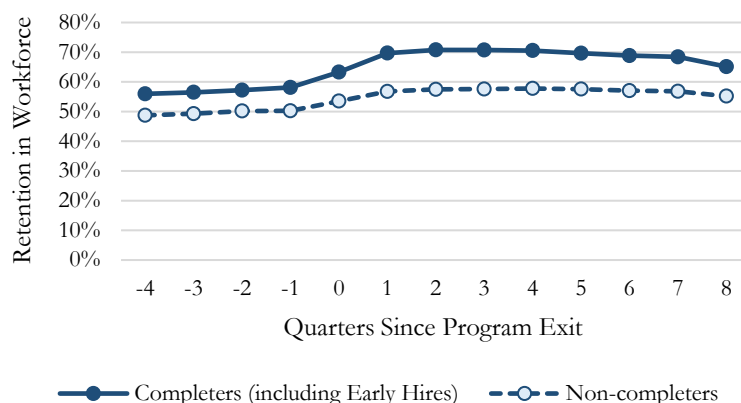

All wage increases are based on at least 29 students, minimizing the effect of small n-sizes.

technical college certificate is harder to gauge as more time passes after graduation (because age and experience also affect earnings), the average graduate's wage was found to increase another 57.8% between one and five years after finishing school. Technical education proves a sound investment for students seeking to better their economic outlook.

Not only can graduation with a technical certificate lead to higher wages, but it also can lead to greater economic stability, as shown through retention in the labor force. In the year after exiting from a technical college, program completers (i.e., graduates plus students hired away early) are retained in the Utah workforce at over 70%. Note, however, that these figures exclude federal, non-profit, and self-employment. It is expected that upon considering these other sources of work, technical college students are retained at higher percentages than shown here. This retention leads to greater economic security for the individual and greater prosperity for the state as these students continue to contribute to their local communities.

Workforce Retention, 4 Quarters Prior to 8 Quarters After Exiting

Performance-based Funding

In 2020, because of the coronavirus pandemic and the resultant economic downturn, the Utah State Legislature did not appropriate any new funds dedicated to performance-based funding. Notwithstanding, herein we examine technical colleges' FY 2020 improvements over their preceding five-year average performance. To evaluate performance, the UTech Board of Trustees in 2017 established a model to score technical colleges based on five categories tied to UTech's mission, with funding apportioned based on relative weights assigned to each category:

- *Certificate Programs (30%)* – A college's score is driven primarily by its number of graduates, counted once *for each distinct program completed*. For example, if a student completes two certificate programs (e.g., CNA and EMT) in the same year, the student is counted twice. More points are awarded for graduates of longer programs than shorter ones. Colleges also receive bonus points for each graduate of a program leading to employment in a high-impact industry as identified by the Utah Department of Workforce Services.
- *Short-term Occupational Training (10%)* – Points are awarded for already-employed students who complete short-term workforce training that does *not* lead to a certificate. More points are awarded for students who complete longer training sessions (≥ 60 hours) than shorter ones.
- *Secondary Completion (15%)* – Points are awarded for secondary students who graduate from a postsecondary certificate program while still in high school. College scores also increase as their proportions of retained secondary students who earn certificates within one year after completing high school increase.
- *Placement (25%)* – Points are awarded for each certificate-seeking student placed in related employment, military service, or continuing education in another postsecondary program. The college's composite placement rate is also factored into the category score, as are additional points for placements from programs leading to high-impact industries. Lastly, points are awarded for placements from underrepresented student populations (ethnic and racial minority groups, students receiving Pell Grants or BIA/DWS sponsorship, students with a disability, single parents, displaced homemakers, public assistance recipients, or students of limited English proficiency).
- *Efficiency (20%)* – Efficiency is operationalized using certificate-seeking student graduation rates stratified by program length. Each rate is multiplied by a factor that increases as the program length increases, resulting in more points accrued for high graduation rates in longer programs. Certificate-seeking graduates per FTE is also factored into the category score.

Based on scoring presented in Appendices B1 through B8 on pages **Error! Bookmark not defined.** through 27, technical colleges' improvement in each of these categories is examined below.

Technical College FY 2020 Performance, as Evaluated Against the
UTech Performance-based Funding Model

College	Category	Weight	FY 2015-19 Avg. Score	FY 2020 Score	Growth
Bridgerland	Certificate Programs	30%	2,560	3,357	31.11%

* Some totals may not equal the sum of their parts due to rounding error.

† Certificate-seeking students are counted once for each accredited program in which they enroll. For example, a student completing one program and enrolling in a second in the same year (e.g., completing CNA then enrolling in EMT) is counted twice.

‡ Non-graduate completers, under direction from COE, are students who exit a program without obtaining a credential but who obtain employment in a field related to instruction consequent to the students' studies.

§ Job Upgrade students are currently employed in a field related to instruction and enroll in only part of an accredited program with the intent to advance in the workplace. Continuing Occupational Education students are also employed but enroll in stand-alone courses with the intent to maintain employment (e.g., regular re-licensure).

|| Secondary headcounts are stratified by the hours accrued within FY 2020. Secondary graduates are stratified by program length, irrespective of when a student's hours were accrued. Some students began programs and accrued hours in FY 2019 but completed their certificates in FY 2020. Hence, secondary graduates in a program length stratification may be greater than the headcount of students completing the specified number of hours during FY 2020.

* Some totals may not equal the sum of their parts due to rounding error.

† Certificate-seeking students are counted once for each accredited program in which they enroll. For example, a student completing one program and enrolling in a second in the same year (e.g., completing CNA then enrolling in EMT) is counted twice.

‡ Non-graduate completers, under direction from COE, are students who exit a program without obtaining a credential but who obtain employment in a field related to instruction consequent to the students' studies.

§ Job Upgrade students are currently employed in a field related to instruction and enroll in only part of an accredited program with the intent to advance in the workplace. Continuing Occupational Education students are also employed but enroll in stand-alone courses with the intent to maintain employment (e.g., regular re-licensure).

|| Secondary headcounts are stratified by the hours accrued within FY 2020. Secondary graduates are stratified by program length, irrespective of when a student's hours were accrued. Some students began programs and accrued hours in FY 2019 but completed their certificates in FY 2020. Hence, secondary graduates in a program length stratification may be greater than the headcount of students completing the specified number of hours during FY 2020.
